

Plywood 18 mm, one sheet 1220 × 610. Through cuts in the numbered order; saw kerf ≈ 4 mm, already left between the parts.
Cut list: 1 base plate 400 × 300, 2 cheeks 450 × 120, 2 blocks 60 × 60. Cut both cheeks at the same saw setting, so they are exactly alike.
If the saw will not take pieces as small as 60 × 60: stop after cut 4 and saw the 2 blocks from the strip at home (cuts 7 and 8). Keep all leftovers.
Dimensions in mm.
